INDEX TO AUTHORS

A

Åberg, Bertil. See *Jorpes, Werner, and Åberg,* 277

Abraham, Edward P. See *Heidelberger, Abraham, and Lepkovsky,* 1461

Adler, M., and **Wintersteiner, O.** A reinvestigation of flavacidin, the penicillin produced by *Aspergillus flavus,* 873

Albanese, Anthony A., Davis, Virginia I., Lein, Marilyn, and **Smetak, Emilie M.** The biochemistry of the metabolic fecal protein nitrogen, 1189

Aldous, J. G. The effect of pH upon the toxicity of iodoacetic acid to yeast cells, 83

Altman, Kurt I., Casarett, G. W., Masters, R. E., Noonan, T. R., and **Salomon, K.** Hemoglobin synthesis from glycine labeled with radioactive carbon in its α-carbon atom, 319

Anderson, Norman G. See *Wilbur and Anderson,* 147

Anfinsen, Christian B. See *Beloff and Anfinsen,* 863

Anker, H. S. Some aspects of the metabolism of pyruvic acid in the intact animal, 1337

—. Synthesis of carbonyl-labeled pyruvic acid, 1333

— and **Raper, R.** On the metabolic fate of pyruvamide and acetamide, 1353

Artom, Camillo, and **Cornatzer, W. E.** The action of ethanolamine, methylethanolamine, and dimethylethanolamine on lipide phosphorylation, 949

Atchley, William A. Studies on the cyclophorase system. IV. Direct demonstration of β oxidation, 123

Auerbach, V. H. See *Knox, Noyce, and Auerbach,* 117

Axelrod, A. E., Purvis, Sarah Ellen, and **Hofmann, Klaus.** The application of structural analogues to enzymatic studies. I. Studies on the mode of action of biotin analogues, 695

Axelrod, A. E. See *McCoy, McKibben, Axelrod, and Hofmann,* 1319, 1327

Axelrod, Bernard. A study of the mechanism of "phosphotransferase" activity by use of radioactive phosphorus, 295

Axelrod, Dorothy J. See *Scott, Axelrod, Fisher, Crowley, and Hamilton,* 283

B

Balls, A. K. See *Schwimmer and Balls,* 465

Barry, Guy T. See *Hogeboom and Barry,* 935

Bartlett, Mary N. See *Kochakian and Bartlett,* 243

Baumann, C. A. See *Sauberlich and Baumann,* 165

Beck, Jay V. A microbiological method for the determination of adenine, 1169

Beckman, William W. See *Hiller, Greif, and Beckman,* 1421

Behrens, Otto K., and **Kingkade, Mary Jane.** Biosynthesis of penicillins. VIII. Studies with new biosynthetic penicillins on penicillin resistance, 1047

Beloff, Anne, and **Anfinsen, Christian B.** The products of proteolysis of some purified proteins, 863

Bendich, Aaron, and **Brown, George Bosworth.** 2,6-Diaminopurine, a precursor of nucleic acid guanine, 1471

Bennett, Edward L., and **Niemann, Carl.** The use of ion exchange resins in the isolation of blood group A-specific substance from hog gastric mucin, 969

Bernheim, Frederick. See *Eadie, Bernheim, and Fitzgerald,* 857

Bird, H. R. See *Lillie, Denton, and Bird,* 1477

Bliss, Alfred F. The absorption spectra of visual purple of the squid and its bleaching products, 563

Blonstein, Muriel. See *Kibrick and Blonstein,* 983

Blum, Amos E. See *Horn, Jones, and Blum*, 59, 679

Borsook, Henry, Deasy, Clara L., Haagen-Smit, A. J., Keighley, Geoffrey, and Lowy, Peter H. The degradation of α-aminoadipic acid in guinia pig liver homogenate, 1395

—, —, —, —, and —. The degradation of L-lysine in guinea pig liver homogenate: formation of α-aminoadipic acid, 1383

—. See *Dubnoff and Borsook*, 789

Bosshardt, David K. See *Skeggs, Huff, Wright, and Bosshardt*, 1459

Bowen, William J. Notes on myoglobin preparation and iron content, 747

Brickson, W. L., Henderson, L. M., Solhjell, I., and Elvehjem, C. A. Antagonism of amino acids in the growth of lactic acid bacteria, 517

Briggs, G. M. See *Shorb and Briggs*, 1463

Broach, Wilson J. See *Keith, Broach, Warren, Day, and Totter*, 1095

Brown, Douglas M. See *Cartwright, Smith, Brown, and Wintrobe*, 585

—. See *Jager, Smith, Nickerson, and Brown*, 1177

Brown, Ellis V. See *Salivar, Grenfell, and Brown*, 977

Brown, George Bosworth. See *Bendich and Brown*, 1471

Bucciero, Mary C. See *Orten and Bucciero*, 961

Burkitt, Vonnie. See *Witter and Stotz*, 501

Burris, R. H. See *MacVicar and Burris*, 511

C

Caldwell, Alvin. See *Jones, Caldwell, and Horn*, 65

Cappiello, Marjorie. See *Wilhelmi, Fiskman, and Russell*, 735

Carpenter, Frederick H., Stacy, Gardner W., Genghof, Dorothy S., Livermore, Arthur H., and du Vigneaud, Vincent. The preparation and antibacterial properties of the crude sodium salts of some synthetic penicillins, 915

Carpenter, Frederick H., Turner, Robert A., and du Vigneaud, Vincent. Benzylpenicillenic acid as an intermediate in the synthesis of benzylpenicillin (penicillin G), 893

Carroll, Richard P. See *Lester and Greenberg*, 53

Cartwright, George E., Smith, Emil L., Brown, Douglas M., and Wintrobe, Maxwell M. Electrophoretic analyses of sera of normal and hypoproteinemic swine, 585

— and **Wintrobe, Maxwell M.** Studies on free erythrocyte protoporphyrin, plasma copper, and plasma iron in protein-deficient and iron-deficient swine, 571

Casarett, G. W. See *Altman, Casarett, Masters, Noonan, and Salomon*, 319

Cerceo, Emily. See *Pearlman and Cerceo*, 847

Chaikoff, I. L. See *Srere, Chaikoff, and Dauben*, 829

—. See *Taurog and Chaikoff*, 639

—. See *Zilversmit, Chaikoff, Feller, and Masoro*, 389

—. See *Zilversmit, Entenman, and Chaikoff*, 193, 209

Chanutin, Alfred, and Ludewig, Stephan. Biochemical studies on the whole and fractionated thymus of rats injected with β-chloroethyl vesicants, 999

Chargaff, Erwin. See *Vischer and Chargaff*, 703, 715

Cheldelin, Vernon H. See *Fels and Cheldelin*, 819

Chinard, Francis P. Interactions of quaternary ammonium compounds and proteins. A simple method for the rapid estimation of urinary protein concentrations with alkyldimethylbenzylammonium compounds, 1439

—. Use of the hypobromite reaction for the estimation of ammonia plus urea nitrogen in urines containing large amounts of protein; the reaction of alkaline hypobromite with proteins, 1449

Chipman, June. See *Geyer, Chipman, and Stare*, 1469

Cohen, Philip P. See *Grisolia and Cohen*, 929
Coolidge, Thomas B. See *Lightfoot and Coolidge*, 477
Cornatzer, W. E. See *Artom and Cornatzer*, 949
Crowley, J. F. See *Scott, Axelrod, Fisher, Crowley, and Hamilton*, 283

D

Dauben, W. G. See *Srere, Chaikoff, and Dauben*, 829
Davis, Virginia I. See *Albanese, Davis, Lein, and Smetak*, 1189
Dawson, Rex M. C. See *Richter and Dawson*, 1199
Day, Paul L. See *Keith, Broach, Warren, Day, and Totter*, 1095
Deasy, Clara L. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 1383, 1395
Denton, Charles A. See *Lillie, Denton, and Bird*, 1477
Deutsch, H. F., and **Nichol, J. C.** Biophysical studies of blood plasma proteins. X. Fractionation studies of normal and immune horse serum, 797
Dubnoff, Jacob W., and **Borsook, Henry.** Dimethylthetin and dimethyl-β-propiothetin in methionine synthesis, 789

E

Eadie, G. S., Bernheim, Frederick, and **Fitzgerald, Robert J.** The kinetics of the oxidation of benzoic acid by certain *Mycobacteria*, 857
Elvehjem, C. A. See *Brickson, Henderson, Solhjell, and Elvehjem*, 517
—. See *Hankes, Riesen, Henderson, and Elvehjem*, 467
Entenman, C. See *Zilversmit, Entenman, and Chaikoff*, 193, 209
Evans, Herbert M. See *Li, Simpson, and Evans*, 843

F

Farlow, M. W. A new synthesis of cystine, 71
Feller, D. D. See *Zilversmit, Chaikoff, Feller, and Masoro*, 389
Fels, I. Gordon, and **Cheldelin, Vernon H.** Methionine in selenium poisoning, 819
Fieser, Louis F., and **Heymann, Hans.** Naphthoquinone antimalarials. XXII. Relative antirespiratory activities (*Plasmodium lophurae*), 1363
—. See *Heymann and Fieser*, 1359
Fisher, Harvey. See *Scott, Axelrod, Fisher, Crowley, and Hamilton*, 283
Fishman, Jacob B. See *Wilhelmi, Fishman, and Russell*, 735
Fitzgerald, Robert J. The inactivation of streptomycin by cyanate, 223
—. See *Eadie, Bernheim, and Fitzgerald*, 857
Follett, Archie E. Preparation and some properties of hyaluronic acid from umbilical cord of the pig, 177
Franklin, A. L. See *Hoffmann, Stokstad, Franklin, and Jukes*, 1465
Frieden, Earl, and **Winzler, Richard J.** The thyroxine-like activity of compounds structurally related to thyroxine, 155

G

Gallagher, T. F. See *Munson, Jones, McCall, and Gallagher*, 73
Gardell, Sven. See *Jorpes and Gardell*, 267
Genghof, Dorothy S. See *Carpenter, Stacy, Genghof, Livermore, and du Vigneaud*, 915
Gest, Howard, and **Kamen, Martin D.** Studies on the phosphorus metabolism of green algae and purple bacteria in relation to photosynthesis, 299
Geyer, Robert P., Chipman, June, and **Stare, F. J.** Oxidation *in vivo* of emulsified radioactive trilaurin administered intravenously, 1469
Gibson, John G., 2nd. See *Vallee and Gibson*, 435, 445
Grafflin, Allan L., and **Green, D. E.** Studies on the cyclophorase system. II. The complete oxidation of fatty acids, 95

Green, Arda Alden. See *Rapport, Green, and Page,* 1237, 1243
Green, D. E. See *Grafflin and Green,* 95
Greenberg, Leon A. See *Lester and Greenberg,* 53
Greif, Roger L. See *Hiller, Greif, and Beckman,* 1421
Grenfell, Thomas C. See *Salivar, Grenfell, and Brown,* 977
Griffin, A. Clark, Nye, William N., Noda, Lafayette, and **Luck, J. Murray.** Tissue proteins and carcinogenesis. I. The effect of carcinogenic azo dyes on liver proteins, 1225
Grisolia, Santiago, and **Cohen, Philip P.** Study of carbon dioxide fixation in the synthesis of citrulline, 929
Grollman, Arthur. See *Stimmel, Grollman, and Huffman,* 461
Gunsalus, I. C. See *Umbreit, O'Kane, and Gunsalus,* 629

H

Haagen-Smit, A. J. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 1383, 1395
Hamilton, Joseph G. See *Scott, Axelrod, Fisher, Crowley, and Hamilton,* 283
Hankes, L. V., Riesen, W. H., Henderson, L. M., and **Elvehjem, C. A.** Liberation of amino acids from raw and heated casein by acid and enzyme hydrolysis, 467
Hanok, Albert. See *Sobel and Hanok,* 1103
Hanson, H. Theo. See *Smith and Hanson,* 997
Harding W. M. See *Shive, Ravel, and Harding,* 991
Harkness, David M. See *Seifter, Harkness, Rubin, and Muntwyler,* 1371
Harmon, Kent M. See *Peterson, Harmon, and Niemann,* 1
Heidelberger, Charles, Abraham, Edward P., and **Lepkovsky, Samuel.** Concerning the mechanism of the mammalian conversion of tryptophan into nicotinic acid, 1461
Henderson, L. M. See *Brickson, Henderson, Solhjell, and Elvehjem,* 517
—. See *Hankes, Riesen, Henderson, and Elvehjem,* 467
Heppel, Leon A., and **Porterfield, Virginia T.** Enzymatic dehalogenation of certain brominated and chlorinated compounds, 763
Herbst, Edward J., and **Snell, Esmond E.** Putrescine as a growth factor for *Hemophilus parainfluenzae,* 989
Heymann, Hans, and **Fieser, Louis F.** Naphthoquinone antimalarials. XXI. Antisuccinate oxidase activity, 1359
—. See *Fieser and Heymann,* 1363
Hiller, Alma, Greif, Roger L., and **Beckman, William W.** Determination of protein in urine by the biuret method, 1421
—, **Plazin, John,** and **Van Slyke, Donald D.** A study of conditions for Kjeldahl determination of nitrogen in proteins. Description of methods with mercury as catalyst, and titrimetric and gasometric measurements of the ammonia formed, 1401
—, —, and —. Substitutes for saponin in the determination of oxygen and carbon monoxide of blood, 1431
Hoffmann, C. E., Stokstad, E. L. R., Franklin, A. L., and **Jukes, Thomas H.** Response of *Lactobacillus leichmannii* 313 to the antipernicious anemia factor, 1465
Hofmann, Klaus. See *Axelrod, Purvis, and Hofmann,* 695
—. See *McCoy, McKibben, Axelrod, and Hofmann,* 1319, 1327
Hogeboom, George H., and **Barry, Guy T.** Purification of diphosphopyridine nucleotide by counter-current distribution, 935
Hogness, John R. See *Roth, Leifer, Hogness, and Langham,* 249
Horn, Millard J., Jones, D. Breese, and **Blum, Amos E.** Microbiological determination of arginine in proteins and foods, 59
—, —, and —. Microbiological deter-

mination of phenylalanine in proteins and foods, 679

Horn, Millard J. See *Jones, Caldwell, and Horn,* 65

Huff, Jesse W. See *Skeggs, Huff, Wright, and Bosshardt,* 1459

Huffman, Max N. See *Stimmel, Grollman, and Huffman,* 461

Hughes, D. E. Glutamine and the growth of *Staphylococcus aureus,* 1473

J

Jager, B. V., Smith, Emil L., Nickerson, Margaret, and **Brown, Douglas M.** Immunological and electrophoretic studies on human γ-globulins, 1177

Jansen, Eugene F. The isolation and identification of 2,2′-dithiolisobutyric acid from asparagus, 657

Jeanes, Allene, Schieltz, N. C., and **Wilham, C. A.** Molecular association in dextran and in branched amylaceous carbohydrates, 617

—, **Wilham, C. A.,** and **Miers, J. C.** Preparation and characterization of dextran from *Leuconostoc mesenteroides,* 603

Jones, D. Breese, Caldwell, Alvin, and **Horn, Millard J.** The availability of DL-lanthionine for the promotion of growth in young rats when added to a cystine- and methionine-deficient diet, 65

—. See *Horn, Jones, and Blum,* 59, 679

Jones, Mary Ellen. See *Munson, Jones, McCall, and Gallagher,* 73

Jorpes, J. Erik, and **Gardell, Sven.** On heparin monosulfuric acid, 267

—, **Werner, Birgitta,** and **Åberg, Bertil.** The fuchsin-sulfurous acid test after periodate oxidation of heparin and allied polysaccharides, 277

Jukes, Thomas H. See *Hoffmann, Stokstad, Franklin, and Jukes,* 1465

K

Kamen, Martin D. See *Gest and Kamen,* 299

Kaplan, Nathan O., and **Lipmann, Fritz.** The acetyl precursor in pyruvate synthesis in *Escherichia coli,* 459

Keighley, Geoffrey. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 1383, 1395

Keith, Cecilia K., Broach, Wilson J., Warren, Doris, Day, Paul L., and **Totter, John R.** Xanthine oxidase and tyrosinase in the livers of chicks receiving graded levels of dietary pteroylglutamic acid, 1095

Kibrick, Andre C., and **Blonstein, Muriel.** Fractionation of serum into albumin and α-, β-, and γ-globulin by sodium sulfate, 983

Kielley, W. Wayne, and **Meyerhof, Otto.** Studies on adenosinetriphosphatase of muscle. II. A new magnesium-activated adenosinetriphosphatase, 591

King, C. G. See *Prusoff, Teply, and King,* 1309

Kingkade, Mary Jane. See *Behrens and Kingkade,* 1047

Kirsner, Joseph B. See *Sheffner, Kirsner, and Palmer,* 89

Knox, W. Eugene, Noyce, B. N., and **Auerbach, V. H.** Studies on the cyclophorase system. III. Obligatory sparking of fatty acid oxidation, 117

Kochakian, Charles D., and **Bartlett, Mary N.** The effect of crystalline adrenal cortical steroids, DL-thyroxine, and epinephrine on the alkaline and acid phosphatases and arginase of the liver and kidney of the normal adult rat, 243

Komarov, S. A. See *Siplet, Komarov, and Shay,* 545

Korkes, Seymour, and **Ochoa, Severo.** Adaptive conversion of malate to lactate and carbon dioxide by *Lactobacillus arabinosus,* 463

Kornberg, Arthur. The participation of inorganic pyrophosphate in the reversible enzymatic synthesis of diphosphopyridine nucleotide, 1475

— and **Lindberg, Olov.** Diphosphopyridine nucleotide pyrophosphatase, 665

Krishnaswamy, K. G., and **Sreenivasan, A.** Separation and determination of the amylose and amylopectin fractions of starch, 1253

L

Lamanna, Carl. See *Putnam, Lamanna, and Sharp,* 401

Lamb, Catherine M. See *Petermann and Lamb,* 685

Langham, Wright H. See *Roth, Leifer, Hogness, and Langham,* 249

Leathem, James H. Influence of testosterone propionate on the plasma and liver proteins of hypothyroid rats, 1285

Leifer, Edgar. See *Roth, Leifer, Hogness, and Langham,* 249

Lein, Marilyn. See *Albanese, Davis, Lein, and Smetak,* 1189

LePage, G. A. Glycolysis in tumor homogenates, 1009

— and **Schneider, Walter C.** Centrifugal fractionation of glycolytic enzymes in tissue homogenates, 1021

Lepkovsky, Samuel. See *Heidelberger, Abraham, and Lepkovsky,* 1461

Lester, David, and **Greenberg, Leon A.** A simple apparatus for the serial measurement of the respiratory exchange in the rat, 53

Levedahl, Blaine H., and **Samuels, Leo T.** The effect of testosterone and methyltestosterone on guanidoacetic acid, creatine, and creatinine in plasma and urine, 327

Levy, Milton, and **Young, Nelson F.** Chemistry of the chick embryo. VI. Accumulation of diphosphopyridine nucleotide, 185

Li, Choh Hao, Simpson, Miriam E., and **Evans, Herbert M.** Iodination of hypophyseal growth hormone, 843

Lifson, Nathan, Lorber, Victor, Sakami, Warwick, and **Wood, Harland G.** The incorporation of acetate and butyrate carbon into rat liver glycogen by pathways other than carbon dioxide fixation, 1263

Lightfoot, Lois H., and **Coolidge, Thomas B.** The distribution of collagen in the guinea pig, 477

Lillie, Robert J., Denton, Charles A., and **Bird, H. R.** Relation of vitamin B_{12} to the growth factor present in cow manure, 1477

Lindberg, Olov. See *Kornberg and Lindberg,* 665

Lipmann, Fritz. See *Kaplan and Lipmann,* 459

Litt, Irene. See *Mazur and Shorr,* 771

Littlejohn, Julia M. See *Singal, Sydenstricker, and Littlejohn,* 1051, 1063, 1069

Livermore, Arthur H. See *Carpenter, Stacy, Genghof, Livermore, and du Vigneaud,* 915

Lorber, Victor. See *Lifson, Lorber, Sakami, and Wood,* 1263

Loring, Hubert S., Ordway, George L., and **Pierce, John G.** A method of assay for cytidine and uridine by means of a pyrimidine-deficient strain of *Neurospora,* 1123

—. See *Pierce and Loring,* 1131

Lowy, Peter H. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 1383, 1395

Luck, J. Murray. See *Griffin, Nye, Noda, and Luck,* 1225

Ludewig, Stephan. See *Chanutin and Ludewig,* 999

Lyle, Gloria G. See *Pardee and Potter,* 1085

—. See *Potter, Pardee, and Lyle,* 1075

M

MacFarland, M. L., and **McHenry, E. W.** Further observations on the lipotropic need for inositol, 429

MacLeod, Robert A., and **Snell, Esmond E.** The effect of related ions on the potassium requirement of lactic acid bacteria, 39

MacVicar, Robert, and **Burris, R. H.** Studies on nitrogen metabolism in tomato with use of isotopically labeled ammonium sulfate, 511

Masoro, E. J. See *Zilversmit, Chaikoff, Feller, and Masoro,* 389

Masters, R. E. See *Altman, Casarett, Masters, Noonan, and Salomon,* 319

Mathews, Martin B. The reduction of cozymase by sodium borohydride, 229

Mattson, Fred H. The site of conversion of carotene to vitamin A, 1467

Maw, George A., and **du Vigneaud, Vincent.** Compounds related to dimethylthetin as sources of labile methyl groups, 1037

— and —. An investigation of the biological behavior of the sulfur analogue of choline, 1029

Mazur, Abraham, and **Shorr, Ephraim.** Hepatorenal factors in circulatory homeostasis. IX. The identification of the hepatic vasodepressor substance, VDM, with ferritin, 771

McCall, Philip J. See *Munson, Jones, McCall, and Gallagher,* 73

McCoy, R. H., McKibben, Juliet N., Axelrod, A. E., and **Hofmann, Klaus.** Oxybiotin metabolism in the chick. I. Deposition of oxybiotin in tissues, 1319

—, —, —, and —. II. Oxybiotin and biotin balance studies, 1327

McHenry, E. W. See *MacFarland and McHenry,* 429

McKibben, Juliet N. See *McCoy, McKibben, Axelrod, and Hofmann,* 1319, 1327

Meyer, Karl. Highly viscous sodium hyaluronate, 993

Meyerhof, Otto. See *Kielley and Meyerhof,* 591

Miers, J. C. See *Jeanes, Wilham, and Miers,* 603

Miller, J. A. See *Mueller and Miller,* 535

Milner, Harold W. The fatty acids of *Chlorella,* 813

Moore, Stanford, and **Stein, William H.** Photometric ninhydrin method for use in the chromatography of amino acids, 367

—. See *Stein and Moore,* 337

Moubasher, Radwan. Reaction of *peri*-naphthindan-2,3,4-trione hydrate with *l*-ascorbic acid and other enediol compounds, with a note on the isolation of dehydro-*l*-ascorbic acid, 529

Mueller, G. C., and **Miller, J. A.** The metabolism of 4-dimethylaminoazobenzene by rat liver homogenates, 535

Munson, Paul L., Jones, Mary Ellen, McCall, Philip J., and **Gallagher, T. F.** A colorimetric method for estimation of dehydroisoandrosterone and its application to urine extracts, 73

Muntwyler, Edward. See *Seifter, Harkness, Rubin, and Muntwyler,* 1371

N

Newell, Dora M. See *Chinard,* 1439, 1449

Nichol, J. C. See *Deutsch and Nichol,* 797

Nickerson, Margaret. See *Jager, Smith, Nickerson, and Brown,* 1177

Niemann, Carl. See *Bennett and Niemann,* 969

—. See *Peterson, Harmon, and Niemann,* 1

Noda, Lafayette. See *Griffin, Nye, Noda, and Luck,* 1225

Noonan, T. R. See *Altman, Casarett, Masters, Noonan, and Salomon,* 319

Noyce, B. N. See *Knox, Noyce, and Auerbach,* 117

Nye, William N. See *Griffin, Nye, Noda, and Luck,* 1225

O

Ochoa, Severo. See *Korkes and Ochoa,* 463

Oesterling, M. Jane. See *Rose, Oesterling, and Womack,* 753

O'Kane, D. J. See *Umbreit, O'Kane, and Gunsalus,* 629

Ordway, George L. See *Loring, Ordway, and Pierce,* 1123

Orten, James M., and **Bucciero, Mary C.** The effect of cysteine, histidine, and methionine on the production of polycythemia by cobalt, 961

P

Page, Irvine H. See *Rapport, Green, and Page,* 1237, 1243

Palmer, Walter L. See *Sheffner, Kirsner, and Palmer,* 89

Pardee, Arthur B., and **Potter, Van R.** Inhibition of succinic dehydrogenase by oxalacetate, 1085

—. See *Potter, Pardee, and Lyle,* 1075

Pearlman, W. H., and **Cerceo, Emily.** The isolation of pregnanol-3(α)-one-20, pregnanediol-3(α),20(β), and etiocholanediol-3(α),17(β) from the bile of pregnant cows, 847

Petermann, Mary L., and **Lamb, Catherine M.** The nucleohistone of beef spleen, 685

Peterson, Jack, Harmon, Kent M., and **Niemann, Carl.** The dependence of the specific activity of urease upon the apparent absolute enzyme concentration, 1

Peterson, W. H. See *Thorne and Peterson*, 413

Pierce, John G., and **Loring, Hubert S.** Purine and pyrimidine antagonism in a pyrimidine-deficient mutant of *Neurospora*, 1131

—. See *Loring, Ordway, and Pierce*, 1123

Plazin, John. See *Hiller, Greif, and Beckman*, 1421

—. See *Hiller, Plazin, and Van Slyke*, 1401, 1431

Porterfield, Virginia T. See *Heppel and Porterfield*, 763

Potter, Van R., Pardee, Arthur B., and **Lyle, Gloria G.** The assay of animal tissues for respiratory enzymes. VIII. Conditions for oxalacetate oxidation in whole homogenates, 1075

—. See *Pardee and Potter*, 1085

Prusoff, W. H., Teply, L. J., and **King, C. G.** The influence of pteroylglutamic acid on nucleic acid synthesis in *Lactobacillus casei*, 1309

Purvis, Sarah Ellen. See *Axelrod, Purvis, and Hofmann*, 695

Putnam, Frank W., Lamanna, Carl, and **Sharp, D. G.** Physicochemical properties of crystalline *Clostridium botulinum* type A toxin, 401

R

Rabinowitz, Jesse C., and **Snell, Esmond E.** The vitamin B_6 group. XIV. Distribution of pyridoxal, pyridoxamine, and pyridoxine in some natural products, 1157

Raper, R. See *Anker and Raper*, 1353

Rapport, Maurice M., Green, Arda Alden, and **Page, Irvine H.** Serum vasoconstrictor (serotonin). III. Chemical inactivation, 1237

—, —, and —. IV. Isolation and characterization, 1243

Ravel, Joanne Macow. See *Shive, Ravel, and Harding*, 991

Richter, Derek, and **Dawson, Rex M. C.** The ammonia and glutamine content of the brain, 1199

Riesen, W. H. See *Hankes, Riesen, Henderson, and Elvehjem*, 467

Roberts, Eugene. Estimation of arginase activity in homogenates, 213

Rose, William C., Oesterling, M. Jane, and **Womack, Madelyn.** Comparative growth on diets containing ten and nineteen amino acids, with further observations upon the rôle of glutamic and aspartic acids, 753

Roth, Lloyd J., Leifer, Edgar, Hogness, John R., and **Langham, Wright H.** Studies on the metabolism of radioactive nicotinic acid and nicotinamide in mice, 249

Rubin, Leonard. See *Seifter, Harkness, Rubin, and Muntwyler*, 1371

Russell, Jane A. See *Wilhelmi, Fishman, and Russell*, 735

S

Sakami, Warwick. The conversion of formate and glycine to serine and glycogen in the intact rat, 995

—. See *Tilfson, Lorber, Sakami, and Wood*, 1263

Salivar, Charles J., Grenfell, Thomas C., and **Brown, Ellis V.** Studies on the naturally occurring penicillins. II. Precipitation of crystalline ammonium penicillins, 977

Salomon, K. See *Altman, Casarett, Masters, Noonan, and Salomon*, 319

Samuels, Leo T. See *Levedahl and Samuels*, 327

Sauberlich, H. E., and **Baumann, C. A.** A factor required for the growth of *Leuconostoc citrovorum*, 165

Sayers, George. See *Wilhelmi and Sayers*, 175

Schieltz, N. C. See *Jeanes, Schieltz, and Wilham*, 617
Schneider, Walter C. Intracellular distribution of enzymes. III. The oxidation of octanoic acid by rat liver fractions, 259
—. See *LePage and Schneider*, 1021

INDEX TO SUBJECTS

A

Acetamide: Metabolism, *Anker and Raper,* 1353

Acetate: Cholesterol synthesis, adrenal cortical tissue, *Srere, Chaikoff, and Dauben,* 829

Liver glycogen, incorporation, pathways, *Lifson, Lorber, Sakami, and Wood,* 1263

Acetic acid: Guanido-. *See* Guanidoacetic acid

Iodo-. *See* Iodoacetic acid

Tri-, related diketones and, metabolism *in vitro, Witter and Stotz,* 501

—, synthesis and properties, *Witter and Stotz,* 485

Acetone: Acetyl-, related ketones and, determination, colorimetric, *Witter, Snyder, and Stotz,* 493

Acetylacetone: Determination, colorimetric, *Witter, Snyder, and Stotz,* 493

-Related ketones, determination, colorimetric, *Witter, Snyder, and Stotz,* 493

Acetyl-S-benzyl-L-cysteine: N-, S-benzylthiopyruvic acid, conversion, *Stekol,* 33

Adenine: Determination, microbiological, *Beck,* 1169

Adenosinetriphosphatase: Muscle, *Kielley and Meyerhof,* 591

—, magnesium-activated, *Kielley and Meyerhof,* 591

Adipic acid: α-Amino-, liver, degradation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 1395

—, — L-lysine, formation from, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 1383

Adrenal(s): Cortex, cholesterol synthesis from acetate, *Srere, Chaikoff, and Dauben,* 829

— steroids, crystalline, liver and kidney phosphatases and arginase, effect, *Kochakian and Bartlett,* 243

Adrenocorticotropic hormone: Electrophoretic mobilities, *Wilhelmi and Sayers,* 175

Alanine: Phenyl-. *See* Phenylalanine

Albumin: Blood serum, fractionation, sodium sulfate use, *Kibrick and Blonstein,* 983

Aldolase: Pea, *Stumpf,* 233

Alga: Green, phosphorus metabolism, photosynthesis relation, *Gest and Kamen,* 299

See also Chlorella

Alkyldimethylbenzylammonium compound(s): Urine protein determination, use, *Chinard,* 1439

Alloxan: Diabetes, glucose oxidation, radioactive carbon in study, *Zilversmit, Chaikoff, Feller, and Masoro,* 389

Amino acid(s): Casein, hydrolysis effect, *Hankes, Riesen, Henderson, and Elvehjem,* 467

Casein-low diets, growth, effect, *Singal, Sydenstricker, and Littlejohn,* 1063

— —, nicotinic acid storage, effect, *Singal, Sydenstricker, and Littlejohn,* 1063

Chromatography, starch columns, *Stein and Moore,* 337

D-, oxidase, liver, protein-free diet, effect, *Seifter, Harkness, Rubin, and Muntwyler,* 1371

Determination, chromatographic, photometric ninhydrin method, *Moore and Stein,* 367

Excretion, *Sheffner, Kirsner, and Palmer,* 89

Feces, *Sheffner, Kirsner, and Palmer,* 89

Growth, effect, *Rose, Oesterling, and Womack,* 753

Lactic acid bacteria, growth, effect, *Brickson, Henderson, Solhjell, and Elvehjem,* 517

Aminoadipic acid: α-, liver, degradation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 1395
—, — L-lysine, formation from, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 1383
Aminopeptidase: Leucine, specificity, *Smith and Slonim,* 835
Ammonia: Brain, *Richter and Dawson,* 1199
Nitrogen, urine, determination, hypobromite use, *Chinard,* 1449
Ammonium compound(s): Alkyldimethylbenzyl-, urine protein determination, use, *Chinard,* 1439
Quaternary, proteins and, interaction, *Chinard,* 1439
Ammonium sulfate: Isotopic, tomato nitrogen, metabolism, use in study, *MacVicar and Burris,* 511
Amylase: α-, crystalline, barley malt, *Schwimmer and Balls,* 465
Amylopectin: Starch, separation and determination, *Krishnaswamy and Sreenivasan,* 1253
Amylose: Starch, separation and determination, *Krishnaswamy and Sreenivasan,* 1253
Androsterone: Dehydroiso-, urine, determination, colorimetric, *Munson, Jones, McCall, and Gallagher,* 73
Anemia: Antipernicious, factor, *Lactobacillus leichmannii* relation, *Hoffmann, Stokstad, Franklin, and Jukes,* 1465
Anhydrase: Carbonic, determination, electrometric and colorimetric, *Wilbur and Anderson,* 147
Antibiotic(s): *Streptomyces, Thorne and Peterson,* 413
Apparatus: Respiratory exchange, *Lester and Greenberg,* 53
Arginase: Activity, homogenates, *Roberts,* 213
Kidney, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett,* 243
Liver, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett,* 243
Arginase—*continued:*
Liver, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler,* 1371
Arginine: Foods, determination, microbiological, *Horn, Jones, and Blum,* 59
Proteins, determination, microbiological, *Horn, Jones, and Blum,* 59
Ascorbic acid: Dehydro-*l*-, isolation, *Moubasher,* 529
l-, *peri*-naphthindan-2,3,4-trione hydrate, reaction, *Moubasher,* 529
Asparagus: 2,2′-Dithiolisobutyric acid, isolation and identification, *Jansen,* 657
Aspartic acid: Derivatives, lycomarasmin determination, *Woolley,* 1299
Growth, effect, *Rose, Oesterling, and Womack,* 753
Aspergillus flavus: Flavicidin, *Adler and Wintersteiner,* 873
Penicillin, *Adler and Wintersteiner,* 873
Azo dye(s): Carcinogenic, liver proteins, effect, *Griffin, Nye, Noda, and Luck,* 1225

B

Bacillus: *See also Lactobacillus*
Bacteria: Anti-, penicillin sodium salts, effect, *Carpenter, Stacy, Genghof, Livermore, and du Vigneaud,* 915
Lactic acid, growth, amino acid effect, *Brickson, Henderson, Solhjell, and Elvehjem,* 517
— —, potassium requirement, *MacLeod and Snell,* 39
Purple, phosphorus metabolism, photosynthesis relation, *Gest and Kamen,* 299
See also Clostridium, Escherichia, Leuconostoc, Mycobacteria, Staphylococcus, Streptomyces
Barley: Malt, α-amylase, crystalline, *Schwimmer and Balls,* 465
Benzene: 4-Dimethylaminoazo-, metabolism, liver, *Mueller and Miller,* 535
Benzoic acid: Oxidation, *Mycobacteria,* kinetics, *Eadie, Bernheim, and Fitzgerald,* 857

Benzylpenicillenic acid: Benzylpenicillin synthesis, intermediate, *Carpenter, Turner, and du Vigneaud,* 893

Benzylpenicillin: Synthesis, benzylpenicillenic acid as intermediate, *Carpenter, Turner, and du Vigneaud,* 893

Benzylthiopyruvic acid: S-, N-acetyl-S-benzyl-L-cysteine, conversion, *Stekol,* 33

—, synthesis, *Stekol,* 33

Bile: Pregnancy, pregnanol-3(α)-one-20, pregnanediol-3(α),20(β), and etiocholanediol-3(α),17(β), isolation, *Pearlman and Cerceo,* 847

Biotin: Analogues, mode of action, *Axelrod, Purvis, and Hofmann,* 695

Blood plasma fat-soluble material, activity, *Trager,* 133

Metabolism, *McCoy, McKibben, Axelrod, and Hofmann,* 1327

Mosquito larva, nutrition effect, *Trager,* 1211

Oxy-, metabolism, chick, *McCoy, McKibben, Axelrod, and Hofmann,* 1319, 1327

—, tissue deposition, *McCoy, Mckibben, Axelrod, and Hofmann,* 1319

Biuret: Urine protein determination, *Hiller, Greif, and Beckman,* 1421

Blood: Carbon monoxide determination, saponin substitutes, *Hiller, Plazin, and Van Slyke,* 1431

Group A-specific substance, gastric mucin, ion exchange resins in isolation, *Bennett and Niemann,* 969

Oxygen determination, saponin substitutes, *Hiller, Plazin, and Van Slyke,* 1431

Protein. *See also* Hypoproteinemia

Tooth composition, relation, *Sobel and Hanok,* 1103

Zinc, *Vallee and Gibson,* 445

— determination, micro-, dithizone method, *Vallee and Gibson,* 435

Blood cell(s): Red, protoporphyrin, protein and iron deficiency, effect, *Cartwright and Wintrobe,* 571

—, zinc, *Vallee and Gibson,* 445

Blood cell(s)—*continued:*

White, zinc, *Vallee and Gibson,* 445

See also Polycythemia

Blood plasma: Copper, protein and iron deficiency, effect, *Cartwright and Wintrobe,* 571

Creatine, testosterone and methyltestosterone effect, *Levedahl and Samuels,* 327

Creatinine, testosterone and methyltestosterone effect, *Levedahl and Samuels,* 327

Fat-soluble material, biotin activity, *Trager,* 133

Guanidoacetic acid, testosterone and methyltestosterone effect, *Levedahl and Samuels,* 327

Iron, protein and iron deficiency, effect, *Cartwright and Wintrobe,* 571

Lecithin turnover, radioactive phosphorus in study, *Zilversmit, Entenman, and Chaikoff,* 209

Phospholipides, turnover, choline action, relation, *Zilversmit, Entenman, and Chaikoff,* 193

Proteins, biophysics, *Deutsch and Nichol,* 797

—, hypothyroidism, testosterone propionate effect, *Leathem,* 1285

Sphingomyelin turnover, radioactive phosphorus in study, *Zilversmit, Entenman, and Chaikoff,* 209

Zinc, *Vallee and Gibson,* 445

Blood serum: Albumin, fractionation, sodium sulfate use, *Kibrick and Blonstein,* 983

Globulins, fractionation, sodium sulfate use, *Kibrick and Blonstein,* 983

Hypoproteinemia, electrophoresis, *Cartwright, Smith, Brown, and Wintrobe,* 585

Immune, fractions, biophysics, *Deutsch and Nichol,* 797

Vasoconstrictor, *Rapport, Green, and Page,* 1237, 1243

—, chemical inactivation, *Rapport, Green, and Page,* 1237

—, isolation and characterization, *Rapport, Green, and Page,* 1243

Brain: Ammonia, *Richter and Dawson,* 1199

Glutamine, *Richter and Dawson,* 1199

Brominated compound(s): Enzymatic dehalogenation, *Heppel and Porterfield,* 763
Butyrate: Liver glycogen, incorporation, pathways, *Lifson, Lorber, Sakami, and Wood,* 1263
Butyric acid: 2,2′-Dithioliso-, asparagus, isolation and identification, *Jansen,* 657

C

Calcification: Tooth, *Sobel and Hanok,* 1103
Carbohydrate(s): Amylaceous, molecular association, *Jeanes, Schieltz, and Wilham,* 617
Metabolism, plants, *Stumpf,* 233
Carbon: Radioactive, glucose oxidation, alloxan diabetes, use in study, *Zilversmit, Chaikoff, Feller, and Masoro,* 389
Carbon dioxide: Fixation, citrulline synthesis, *Grisolia and Cohen,* 929
Malate conversion, *Lactobacillus arabinosus, Korkes and Ochoa,* 463
Carbonic anhydrase: Determination, electrometric and colorimetric, *Wilbur and Anderson,* 147
Carbon monoxide: Blood, determination, saponin substitutes, *Hiller, Plazin, and Van Slyke,* 1431
Carbonyl: -Labeled pyruvic acid, synthesis, *Anker,* 1333
Carboxypeptidase: Pancreas, identification, *Smith and Hanson,* 997
Carcinogenesis: Tissue proteins and, *Griffin, Nye, Noda, and Luck,* 1225
Carotene: Vitamin A, conversion site, *Mattson,* 1467
Casein: Amino acids, hydrolysis effect, *Hankes, Riesen, Henderson, and Elvehjem,* 467
-Low diets, growth, amino acids, effect, *Singal, Sydenstricker, and Littlejohn,* 1063
— —, nicotinic acid storage, amino acids, effect, *Singal, Sydenstricker, and Littlejohn,* 1063
Chlorella: Fatty acids, *Milner,* 813
Chlorinated compound(s): Enzymatic dehalogenation, *Heppel and Porterfield,* 763
Chloroethyl: β-, vesicants, thymus, effect, *Chanutin and Ludewig,* 1063
Cholesterol: Synthesis from acetate, adrenal cortical tissue, *Srere, Chaikoff, and Dauben,* 829
Choline: Growth, effect, *Treadwell,* 1141
—, protein-low diet, effect, *Treadwell,* 1149
Lipotropism, effect, *Treadwell,* 1141
—, protein-low diet, effect, *Treadwell,* 1149
Phospholipide turnover, liver and blood plasma, relation, *Zilversmit, Entenman, and Chaikoff,* 193
Sulfur analogue, behavior, *Maw and du Vigneaud,* 1029
Citrulline: Synthesis, carbon dioxide fixation, *Grisolia and Cohen,* 929
Clostridium botulinum: Toxin, type A, crystalline, physicochemical properties, *Putnam, Lamanna, and Sharp,* 401
Cobalt: Glycylglycine dipeptidase action, rôle, *Smith,* 21
Polycythemia, cysteine, histidine, and methionine effect, *Orten and Bucciero,* 961
Collagen: Guinea pig, *Lightfoot and Coolidge,* 477
Copper: Blood plasma, protein and iron deficiency, effect, *Cartwright and Wintrobe,* 571
Corn: Tissue nicotinic acid, effect, *Singal, Sydenstricker, and Littlejohn,* 1069
Cozymase: Reduction, sodium borohydride effect, *Mathews,* 229
See also Diphosphopyridine nucleotide
Creatine: Blood plasma, testosterone and methyltesterone effect, *Levedahl and Samuels,* 327
Urine, testosterone and methyltestosterone effect, *Levedahl and Samuels,* 327
Creatinine: Blood plasma, testosterone and methyltestosterone effect, *Levedahl and Samuels,* 327
Urine, testosterone and methyltestos-

Creatinine—*continued:*
terone effect, *Levedahl and Samuels*, 327
Cyanate: Streptomycin, effect, *Fitzgerald*, 223
Cyclophorase: System, *Grafflin and Green*, 95
Knox, Noyce, and Auerbach, 117
Atchley, 123
Cysteine: N-Acetyl-S-benzyl-L-, S-benzylthiopyruvic acid, conversion, *Stekol*, 33
Cobalt polycythemia, effect, *Orten and Bucciero*, 961
DL-β,β-Diethyl-, synthesis, *du Vigneaud, Stacy, and Todd*, 907
DL-β-Ethyl-β-methyl-, synthesis, *du Vigneaud, Stacy, and Todd*, 907
Cystine: -Deficient diet, DL-lanthionine, growth effect, *Jones, Caldwell, and Horn*, 65
Growth, effect, *Treadwell*, 1141
—, protein-low diet, effect, *Treadwell*, 1149
Lipotropism, effect, *Treadwell*, 1141
—, protein-low diet, effect, *Treadwell*, 1149
Synthesis, *Farlow*, 71
Cytidine: Determination, pyrimidine-deficient *Neurospora*, use, *Loring, Ordway, and Pierce*, 1123

D

Dehydro-*l*-ascorbic acid: Isolation, *Moubasher*, 529
Dehydrogenase: Succinic, oxalacetate effect, *Pardee and Potter*, 1085
Dehydroisoandrosterone: Urine, determination, colorimetric, *Munson, Jones, McCall, and Gallagher*, 73
Dextran: *Leuconostoc mesenteroides*, preparation and characterization, *Jeanes, Wilham, and Miers*, 603
Molecular association, *Jeanes, Schieltz, and Wilham*, 617
Diabetes: Alloxan, glucose oxidation, radioactive carbon in study, *Zilversmit, Chaikoff, Feller, and Masoro*, 389
Diaminopurine: 2,6-, nucleic acid guanine, precursor, *Bendich and Brown*, 1471
Diet: Tooth composition, relation, *Sobel and Hanok*, 1103
Diethylcysteine: DL-β,β-, synthesis, *du Vigneaud, Stacy, and Todd*, 907
Dimethylaminoazobenzene: 4-, metabolism, liver, *Mueller and Miller*, 535
Dimethylethanolamine: Lipide phosphorylation, effect, *Artom and Cornatzer*, 949
Dimethyl-β-propiothetin: Methionine synthesis, rôle, *Dubnoff and Borsook*, 789
Dimethylthetin: Methionine synthesis, rôle, *Dubnoff and Borsook*, 789
-Related compounds, labile methyl groups, source, *Maw and du Vigneaud*, 1037
Dipeptidase(s): *Smith*, 9, 21
Glycylglycine, action, cobalt rôle, *Smith*, 21
Glycyl-L-leucine, tissue, *Smith*, 9
Diphosphopyridine nucleotide: Embryo, chick, *Levy and Young*, 185
Purification, counter-current distribution, *Hogeboom and Barry*, 935
Pyrophosphatase, *Kornberg and Lindberg*, 665
Synthesis, enzymatic, inorganic pyrophosphate relation, *Kornberg*, 1475
See also Cozymase
Dithiolisobutyric acid: 2,2'-, asparagus, isolation and identification, *Jansen*, 657
Dithizone: Blood and tissue zinc, determination, micro-, use, *Vallee and Gibson*, 435
Dye: Azo, carcinogenic, liver proteins, effect, *Griffin, Nye, Noda, and Luck*, 1225

E

Embryo: Chick, chemistry, *Levy and Young*, 185
—, diphosphopyridine nucleotide, *Levy and Young*, 185
Enzyme(s): Action, structural analogues, use in study, *Axelrod, Purvis, and Hofmann*, 695

Enzyme(s)—*continued:*
Brominated and chlorinated compounds, dehalogenation, *Heppel and Porterfield,* 763
Casein amino acids, hydrolysis, *Hankes, Riesen, Henderson, and Elvehjem,* 467
Diphosphopyridine nucleotide synthesis, inorganic pyrophosphate relation, *Kornberg,* 1475
Glycolytic, tissue, fractionation, *LePage and Schneider,* 1021
Intracellular distribution, *Schneider,* 259
Respiratory, determination, *Potter, Pardee, and Lyle,* 1075
See also Adenosinetriphosphatase, Aldolase, Aminopeptidase, Amylase, Anhydrase, Arginase, Carboxypeptidase, Cyclophorase, Dehydrogenase, Dipeptidase, Oxidase, Phosphotransferase, Pyrophosphatase, Tyrosinase, Urease
Epinephrine: Kidney phosphatase and arginase, effect, *Kochakian and Bartlett,* 243
Liver phosphatase and arginase, effect, *Kochakian and Bartlett,* 243
Erythrocyte(s): *See* Blood cell, red
Escherichia coli: Pyruvate synthesis, acetyl precursor, *Kaplan and Lipmann,* 459
Estriol: 16-Ketoestrone conversion, *in vivo, Stimmel, Grollman, and Huffman,* 461
Estrone: 16-Keto-, conversion to estriol *in vivo, Stimmel, Grollman, and Huffman,* 461
Ethanolamine: Dimethyl-, lipide phosphorylation, effect, *Artom and Cornatzer,* 949
Lipide phosphorylation, effect, *Artom and Cornatzer,* 949
Methyl-, lipide phosphorylation, effect, *Artom and Cornatzer,* 949
Ethyl-β-methylcysteine: DL-β-, synthesis, *du Vigneaud, Stacy, and Todd,* 907
Etiocholanediol-3(α),17(β): Bile, pregnancy, isolation, *Pearlman and Cerceo,* 847

F

Fat(s): -Soluble material, biotin-like, mosquito larva nutrition, effect, *Trager,* 1211
— —, blood plasma, biotin activity, *Trager,* 133
Fatty acid(s): *Chlorella, Milner,* 813
Oxidation, *Grafflin and Green,* 95
—, sparking, *Knox, Noyce, and Auerbach,* 117
Feces: Amino acids, *Sheffner, Kirsner, and Palmer,* 89
Protein nitrogen, biochemistry, *Albanese, Davis, Lein, and Smetak,* 1189
Ferritin: Liver vasodepressor substance, relation, *Mazur and Shorr,* 771
Flavicidin: *Aspergillus flavus, Adler and Wintersteiner,* 873
Food(s): Arginine determination, microbiological, *Horn, Jones, and Blum,* 59
Phenylalanine determination, microbiological, *Horn, Jones, and Blum,* 679
Formate: Glycogen conversion from, *Sakami,* 995
Serine conversion from, *Sakami,* 995
Fuchsin: -Sulfurous acid test, heparin, *Jorpes, Werner, and Åberg,* 277

G

Gastric juice: Mucin, determination, *Siplet, Komarov, and Shay,* 545
Globulin(s): Blood serum, fractionation, sodium sulfate use, *Kibrick and Blonstein,* 983
γ-, immunology and electrophoresis, *Jager, Smith, Nickerson, and Brown,* 1177
Glucose: Labeled, oxidation, alloxan diabetes, *Zilversmit, Chaikoff, Feller, and Masoro,* 389
Glutamic acid: Growth, effect, *Rose, Oesterling, and Womack,* 753
Pteroyl-. *See* Pteroylglutamic acid
Glutamine: Brain, *Richter and Dawson,* 1199
Staphylococcus aureus growth, relation, *Hughes,* 1473

Glycine: Carbon-labeled, hemoglobin synthesis, *Altman, Casarett, Masters, Noonan, and Salomon,* 319
Glycogen conversion from, *Sakami,* 995
Glycyl-. *See* Glycylglycine
Serine conversion from, *Sakami,* 995
Glycogen: Formate conversion to, *Sakami,* 995
Glycine conversion to, *Sakami,* 995
Liver, acetate and butyrate incorporation, pathways, *Lifson, Lorber, Sakami, and Wood,* 1263
Glycolysis: Enzymes, tissue, fractionation, *LePage and Schneider,* 1021
Tumor, *LePage,* 1009
Glycylglycine: Dipeptidase, action, cobalt rôle, *Smith,* 21
Glycyl-L-leucine: Dipeptidase, tissue, *Smith,* 9
Growth: Amino acids, effect, *Rose, Oesterling, and Womack,* 753
Aspartic acid effect, *Rose, Oesterling, and Womack,* 753
Casein-low diets, amino acids, effect, *Singal, Sydenstricker, and Littlejohn,* 1063
Choline effect, *Treadwell,* 1141
Cystine effect, *Treadwell,* 1141
Cystine-deficient diet, DL-lanthionine effect, *Jones, Caldwell, and Horn,* 65
Factor, manure, vitamin B_{12} relation, *Lillie, Denton, and Bird,* 1477
Glutamic acid effect, *Rose, Oesterling, and Womack,* 753
Hemophilus parainfluenzae, putrescine effect, *Herbst and Snell,* 989
Hormone, pituitary, anterior, preparation, *Wilhelmi, Fishman, and Russell,* 735
—, —, iodine, *Li, Simpson, and Evans,* 843
Lactic acid bacteria, amino acid effect, *Brickson, Henderson, Solhjell, and Elvehjem,* 517
Leuconostoc citrovorum, factor, *Sauberlich and Baumann,* 165
Lipotropism and, *Treadwell,* 1141, 1149
Methionine effect, *Treadwell,* 1141
Growth—*continued:*
Methionine-deficient diet, DL-lanthionine effect, *Jones, Caldwell, and Horn,* 65
Protein-low diets, cystine, methionine, and choline, effect, *Treadwell,* 1149
Staphylococcus aureus, glutamine relation, *Hughes,* 1473
Thiopyruvic acid effect, *Stekol,* 33
Guanidoacetic acid: Blood plasma and urine, testosterone and methyltestosterone effect, *Levedahl and Samuels,* 327
Guanine: Nucleic acid, 2,6-diaminopurine as precursor, *Bendich and Brown,* 1471
Guinea pig: Collagen, *Lightfoot and Cooledge,* 477

H

Hemoglobin: Synthesis, carbon-labeled glycine, *Altman, Casarett, Masters, Noonan, and Salomon,* 319
Hemophilus parainfluenzae: Growth, putrescine effect, *Herbst and Snell,* 989
Heparin: Fuchsin-sulfurous acid test, *Jorpes, Werner, and Åberg,* 277
Monosulfuric acid, *Jorpes and Gardell,* 267
Histidine: Cobalt polycythemia, effect, *Orten and Bucciero,* 961
Histone: Nucleo-, spleen, *Petermann and Lamb,* 685
Homeostasis: Circulatory, hepatorenal factors, *Mazur and Shorr,* 771
Hyaluronic acid: Umbilical cord, preparation and properties, *Follett,* 177
Hypobromite: Protein and, reaction, *Chinard,* 1449
Urine ammonia plus urea nitrogen, determination, use, *Chinard,* 1449
Hypophysis: *See* Pituitary
Hypoproteinemia: Blood serum, electrophoresis, *Cartwright, Smith, Brown, and Wintrobe,* 585
Hypothyroidism: Blood plasma and liver proteins, testosterone propionate effect, *Leathem,* 1285

I

Inositol: Lipotropic need, relation, *MacFarland and McHenry*, 429

Iodine: Pituitary growth hormone, effect, *Li, Simpson, and Evans*, 843

Iodoacetic acid: Yeast, action, hydrogen ion concentration effect, *Aldous*, 83

Ion: Exchange resins, blood group A-specific substance, isolation, gastric mucin, use, *Bennett and Niemann*, 969

Iron: Blood cell, red, protoporphyrin, blood plasma copper and iron, deficiency effect, *Cartwright and Wintrobe*, 571

— plasma, protein and iron deficiency, effect, *Cartwright and Wintrobe*, 571

Myoglobin, *Bowen*, 747

Isoleucine: Determination, chromatographic, *Stein and Moore*, 337

K

Ketoestrone: 16-, conversion to estriol *in vivo*, *Stimmel, Grollman, and Huffman*, 461

Ketone(s): Di-, acetylacetone-related, determination, colorimetric, *Witter, Snyder, and Stotz*, 493

—, triacetic acid-related, metabolism *in vitro*, *Witter and Stotz*, 501

Kidney: Arginase, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett*, 243

Phosphatase, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett*, 243

Kjeldahl: Protein nitrogen determination, *Hiller, Plazin, and Van Slyke*, 1401

L

Lactate: Malate conversion, *Lactobacillus arabinosus*, *Korkes and Ochoa*, 463

Lactic acid: Bacteria, growth, amino acid effect, *Brickson, Henderson, Solhjell, and Elvehjem*, 517

—, potassium requirement, *MacLeod and Snell*, 39

Lactobacillus arabinosus: Malate conversion to lactate and carbon dioxide, *Korkes and Ochoa*, 463

Lactobacillus casei: Nucleic acid synthesis, pteroylglutamic acid effect, *Prusoff, Teply, and King*, 1309

Lactobacillus lactis: Cultures, dissociation, vitamin B_{12} requirement, effect, *Shorb and Briggs*, 1463

Lactobacillus leichmanii: Animal protein factor, determination, use, *Skeggs, Huff, Wright, and Bosshardt*, 1459

Antipernicious anemia factor, effect, *Hoffmann, Stokstad, Franklin, and Jukes*, 1465

Lanthionine: DL-, cystine- and methionine-deficient diet, growth effect, *Jones, Caldwell, and Horn*, 65

Larva: Mosquito, biotin and biotin-like fat-soluble materials, nutrition effect, *Trager*, 1211

Laurin: Tri-, radioactive, oxidation *in vivo*, *Geyer, Chipman, and Stare*, 1469

Lecithin: Blood plasma, turnover, radioactive phosphorus in study, *Zilversmit, Entenman, and Chaikoff*, 209

Leucine: Aminopeptidase, specificity, *Smith and Slonim*, 835

Determination, chromatographic, *Stein and Moore*, 337

Glycyl-L-, dipeptidase, tissue, *Smith*, 9

Iso-, determination, chromatographic, *Stein and Moore*, 337

Leucocyte(s): *See* Blood cell, white

Leuconostoc citrovorum: Growth factor, *Sauberlich and Baumann*, 165

Leuconostoc mesenteroides: Dextran, preparation and characterization, *Jeanes, Wilham, and Miers*, 603

Lipide(s): Phospho-. *See* Phospholipide

Phosphorylation, ethanolamine, methylethanolamine, and dimethylethanolamine effect, *Artom and Cornatzer*, 949

Lipotropic need: Inositol relation, *MacFarland and McHenry*, 429

Lipotropism: Choline effect, *Treadwell*, 1141

Lipotropism—*continued:*
Cystine effect, *Treadwell*, 1141
Growth and, *Treadwell*, 1141, 1149
Methionine effect, *Treadwell*, 1141
Protein-low diets, cystine, methionine, and choline, effect, *Treadwell*, 1149
Liver: D-Amino acid oxidase, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler*, 1371
α-Aminoadipic acid, degradation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 1395
Arginase, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett*, 243
—, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler*, 1371
4-Dimethylaminoazobenzene metabolism, *Mueller and Miller*, 535
Glycogen, acetate and butyrate incorporation, pathways, *Lifson, Lorber, Sakami, and Wood*, 1263
L-Lysine, α-aminoadipic acid formation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 1383
—, degradation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 1383
Nicotinic acid, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler*, 1371
Octanoic acid oxidation, *Schneider*, 259
Phosphatase, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett*, 243
Phospholipides, turnover, choline action, relation, *Zilversmit, Entenman, and Chaikoff*, 193
Protein, carcinogenic azo dyes, effect, *Griffin, Nye, Noda, and Luck*, 1225
Proteins, hypothyroidism, testosterone propionate effect, *Leathem*, 1285
Riboflavin, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler*, 1371
Tyrosinase, pteroylglutamic acid effect, *Keith, Broach, Warren, Day, and Totter*, 1095
Liver—*continued:*
Vasodepressor substance, ferritin relation, *Mazur and Shorr*, 771
Xanthine oxidase, pteroylglutamic acid effect, *Keith, Broach, Warren, Day, and Totter*, 1095
Lycomarasmin: Aspartic acid derivatives, determination, *Woolley*, 1299
Chemical constitution, *Woolley*, 1291
Synthesis, *Woolley*, 1299
Lysine: L-, liver, α-aminoadipic acid formation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 1383
—, —, degradation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 1383

M

Magnesium: Muscle adenosinetriphosphatase activity, effect, *Kielley and Meyerhof*, 591
Malaria: Antimalarials, naphthoquinone, *Heymann and Fieser*, 1359
Fieser and Heymann, 1363
Malate: Lactate and carbon dioxide conversion from *Lactobacillus arabinosus, Korkes and Ochoa*, 463
Malt: Barley, α-amylase, crystalline, *Schwimmer and Balls*, 465
Manure: Growth factor, vitamin B_{12} relation, *Lillie, Denton, and Bird*, 1477
Metabolism: Carbohydrates, plants, *Stumpf*, 233
Methionine: Cobalt polycythemia, effect, *Orten and Bucciero*, 961
-Deficient diet, DL-lanthionine, growth effect, *Jones, Caldwell, and Horn*, 65
Determination, chromatographic, *Stein and Moore*, 337
Growth, effect, *Treadwell*, 1141
—, protein-low diet, effect, *Treadwell*, 1149
Lipotropism, effect, *Treadwell*, 1141
—, protein-low diet, effect, *Treadwell*, 1149
Selenium poisoning, effect, *Fels and Cheldelin*, 819
Synthesis, dimethylthetin and di-

Methionine—*continued:*
methyl-β-propiothetin relation, *Dubnoff and Borsook*, 789
Methylethanolamine: Lipide phosphorylation, effect, *Artom and Cornatzer*, 949
Methyl group(s): Labile, dimethylthetin-related compounds as source, *Maw and du Vigneaud*, 1037
Methyltestosterone: Blood plasma guanidoacetic acid, creatine, and creatinine, effect, *Levedahl and Samuels*, 327
Urine guanidoacetic acid, creatine, and creatinine, effect, *Levedahl and Samuels*, 327
Mold: *See also Aspergillus, Neurospora*
Mosquito: Larva, biotin and biotin-like fat-soluble materials, nutrition effect, *Trager*, 1211
Mucin: Gastric, blood group A-specific substance, isolation, ion exchange resins, use, *Bennett and Niemann*, 969
— juice, determination, *Siplet, Komarov, and Shay*, 545
Muscle: Adenosinetriphosphatase, *Kielley and Meyerhof*, 591
—, magnesium-activated, *Kielley and Meyerhof*, 591
Mycobacteria: Benzoic acid oxidation, kinetics, *Eadie, Bernheim, and Fitzgerald*, 857
Myoglobin: Iron, *Bowen*, 747
Preparation, *Bowen*, 747

N

Naphthindan-2,3,4-trione hydrate: *peri-*, *l*-ascorbic acid and enediol compounds, reaction, *Moubasher*, 529
Naphthoquinone: Antimalarials, *Heymann and Fieser*, 1359
Fieser and Heymann, 1363
Plasmodium lophurae respiration, effect, *Fieser and Heymann*, 1363
Succinate oxidase, effect, *Heymann and Fieser*, 1359
Neurospora: Pyrimidine-deficient, cytidine and uridine determination, use, *Loring, Ordway, and Pierce*, 1123
Neurospora—*continued:*
Pyrimidine-deficient, purine and pyrimidine antagonism, *Pierce and Loring*, 1131
Nicotinamide: Radioactive, metabolism, *Roth, Leifer, Hogness, and Langham*, 249
Nicotinic acid: -Deficient diets, tryptophan rôle, *Singal, Sydenstricker, and Littlejohn*, 1051
Liver, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler*, 1371
Radioactive, metabolism, *Roth, Leifer, Hogness, and Langham*, 249
Storage, casein-low diets, amino acids, effect, *Singal, Sydenstricker, and Littlejohn*, 1063
Tissue, corn ration, effect, *Singal, Sydenstricker, and Littlejohn*, 1069
Tryptophan conversion to, mechanism, *Heidelberger, Abraham, and Lepkovsky*, 1461
Nitrogen: Ammonia, urine, determination, hypobromite use, *Chinard*, 1449
Protein, determination, Kjeldahl, *Hiller, Plazin, and Van Slyke*, 1401
—, feces, biochemistry, *Albanese, Davis, Lein, and Smetak*, 1189
Tomato, metabolism, isotopic ammonium sulfate in study, *MacVicar and Burris*, 511
Urea, urine, determination, hypobromite use, *Chinard*, 1449
Nucleic acid: Guanine, 2,6-diaminopurine as precursor, *Bendich and Brown*, 1471
Lactobacillus casei synthesis, pteroylglutamic acid effect, *Prusoff, Teply, and King*, 1309
Pentose, pancreas, *Vischer and Chargaff*, 715
—, yeast, *Visher and Chargaff*, 715
Nucleohistone: Spleen, *Petermann and Lamb*, 685
Nucleotide: Diphosphopyridine. *See* Diphosphopyridine nucleotide

O

Octanic acid: Oxidation, liver fractions, *Schneider*, 259

Oxalacetate: Oxidation, homogenates, *Potter, Pardee, and Lyle,* 1075
Succinic dehydrogenase, effect, *Pardee and Potter,* 1085
Oxidase: D-Amino acid, liver, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler,* 1371
Succinate, naphthoquinone effect, *Heymann and Fieser,* 1359
Xanthine, liver, pteroylglutamic acid effect, *Keith, Broach, Warren, Day, and Totter,* 1095
Oxidation: β, *Atchley,* 123
Oxybiotin: Metabolism, chick, *McCoy, McKibben, Axelrod, and Hofmann,* 1319, 1327
Tissue, deposition, *McCoy, McKibben, Axelrod, and Hofmann,* 1319
Oxygen: Blood, determination, saponin substitutes, *Hiller, Plazin, and Van Slyke,* 1431

P

Pancreas: Carboxypeptidase, identification, *Smith and Hanson,* 997
Pentose nucleic acids, *Vischer and Chargaff,* 715
Parathyroid: Hormone, electrophoretic mobilities, *Wilhelmi and Sayers,* 175
Pea(s): Aldolase, *Stumpf,* 233
Pectin: Amylo-, starch, separation and determination, *Krishnaswamy and Sreenivasan,* 1253
Penicillenic acid: Benzyl-, benzylpenicillin synthesis, intermediate, *Carpenter, Turner, and du Vigneaud,* 893
Penicillin(s): Ammonium, crystalline, precipitation, *Salivar, Grenfell, and Brown,* 977
Aspergillus flavus, Adler and Wintersteiner, 873
Benzyl-, synthesis, benzylpenicillenic acid as intermediary, *Carpenter, Turner, and du Vigneaud,* 893
Biosynthesis, *Behrens and Kingkade,* 1047
Biosynthetic, penicillin resistance, *Behrens and Kingkade,* 1047
G. *See* Benzylpenicillin
Penicillin(s)—*continued:*
Naturally occurring, *Salivar, Grenfell, and Brown,* 977
Synthetic, sodium salts, preparation and antibacterial properties, *Carpenter, Stacy, Genghof, Livermore, and du Vigneaud,* 915
Pentose: Nucleic acid, pancreas, *Vischer and Chargaff,* 715
— —, yeast, *Vischer and Chargaff,* 715
Peptidase: Amino-, leucine, specificity, *Smith and Slonim,* 835
Carboxy-, pancreas, identification, *Smith and Hanson,* 997
Di-. *See* Dipeptidase
Peptide(s): Methylated, hydrolysis, *Smith,* 21
Phenylalanine: Determination, chromatographic, *Stein and Moore,* 337
Foods, determination, microbiological, *Horn, Jones, and Blum,* 679
Proteins, determination, microbiological, *Horn, Jones, and Blum,* 679
Phosphatase: Adenosinetri-, muscle, *Kielley and Meyerhof,* 591
—, —, magnesium-activated, *Kielley and Meyerhof,* 591
Kidney, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett,* 243
Liver, adrenal cortex steroids, DL-thyroxine, and epinephrine, effect, *Kochakian and Bartlett,* 243
Pyro-, diphosphopyridine nucleotide, *Kornberg and Lindberg,* 665
Phospholipide(s): Blood plasma, turnover, choline action, relation, *Zilversmit, Entenman, and Chaikoff,* 193
Liver, turnover, choline action, relation, *Zilversmit, Entenman, and Chaikoff,* 193
Phosphorus: Metabolism, algae and bacteria, photosynthesis relation, *Gest and Kamen,* 299
Radioactive, blood plasma lecithin and sphingomyelin turnover, use in study, *Zilversmit, Entenman, and Chaikoff,* 209
—, phosphotransferase mechanism, use in study, *Axelrod,* 295

Phosphorylation: Lipide, ethanolamine, methylethanolamine, and dimethylethanolamine effect, *Artom and Cornatzer*, 949
Phosphotransferase: Mechanism, radioactive phosphorus in study, *Axelrod*, 295
Photosynthesis: Algae, phosphorus metabolism, relation, *Gest and Kamen*, 299
Bacteria, phosphorus metabolism, relation, *Gest and Kamen*, 299
Pituitary: Anterior, growth hormone, preparation, *Wilhelmi, Fishman, and Russell*, 735
Growth hormone, iodine effect, *Li, Simpson, and Evans*, 843
Plant(s): Carbohydrate metabolism, *Stumpf*, 233
Plasmodium lophurae: Respiration, naphthoquinone effect, *Fieser and Heymann*, 1363
Plutonium: Metabolism, intramuscular injection effect, *Scott, Axelrod, Fisher, Crowley, and Hamilton*, 283
Polycythemia: Cobalt-produced, cysteine, histidine, and methionine effect, *Orten and Bucciero*, 961
Porphyrin: Proto-, blood cell, red, protein and iron deficiency, effect, *Cartwright and Wintrobe*, 571
Potassium: Lactic acid bacteria, requirement, *MacLeod and Snell*, 39
Pregnancy: Bile pregnanol-3(α)-one-20, pregnanediol-3(α),20(β), and etiocholanediol-3(α),17(β), isolation, *Pearlman and Cerceo*, 847
Pregnanediol-3(α),20(β): Bile, pregnancy, isolation, *Pearlman and Cerceo*, 847
Pregnanol-3(α)-one-20: Bile, pregnancy, isolation, *Pearlman and Cerceo*, 847
Protein(s): Ammonium compounds, quaternary, and, interaction, *Chinard*, 1439
Arginine determination, microbiological, *Horn, Jones, and Blum*, 59
Blood. *See also* Hypoproteinemia
— cell, red, protoporphyrin, blood
Protein(s)—*continued:*
plasma copper and iron, deficiency effect, *Cartwright and Wintrobe*, 571
Blood plasma, biophysics, *Deutsch and Nichol*, 797
——, hypothyroidism, testosterone propionate effect, *Leathem*, 1285
Factor, animal, determination, *Lactobacillus leichmannii* use, *Skeggs, Huff, Wright, and Bosshardt*, 1459
-Free diet, liver nicotinic acid, riboflavin, D-amino acid oxidase, and arginase, effect, *Seifter, Harkness, Rubin, and Muntwyler*, 1371
Hypobromite reaction, *Chinard*, 1449
Liver, carcinogenic azo dyes, effect, *Griffin, Nye, Noda, and Luck*, 1225
—, hypothyroidism, testosterone propionate effect, *Leathem*, 1285
-Low diet, choline, growth and lipotropism, effect, *Treadwell*, 1149
— —, cystine, growth and lipotropism, effect, *Treadwell*, 1149
— —, methionine, growth and lipotropism, effect, *Treadwell*, 1149
Nitrogen, determination, Kjeldahl, *Hiller, Plazin, and Van Slyke*, 1401
—, feces, biochemistry, *Albanese, Davis, Lein, and Smetak*, 1189
Phenylalanine determination, microbiological, *Horn, Jones, and Blum*, 679
Purified, proteolysis products, *Beloff and Anfinsen*, 863
Tissue, carcinogenesis and, *Griffin, Nye, Noda, and Luck*, 1225
Urine, determination, alkyldimethylbenzylammonium compounds, use, *Chinard*, 1439
—, —, biuret method, *Hiller, Greif, and Beckman*, 1421
Protoporphyrin: Blood cell, red, protein and iron deficiency, effect, *Cartwright and Wintrobe*, 571
Protozoa: *See also Plasmodium*
Pteroylglutamic acid: Liver tyrosinase, effect, *Keith, Broach, Warren, Day, and Totter*, 1095

Pteroylglutamic acid—*continued:*
Liver xanthine oxidase, effect, *Keith, Broach, Warren, Day, and Totter*, 1095
Nucleic acid synthesis, *Lactobacillus casei*, effect, *Prusoff, Teply, and King*, 1309
Purine(s): Determination, micro-, *Vischer and Chargaff*, 703
2,6-Diamino-, nucleic acid guanine, precursor, *Bendich and Brown*, 1471
-Pyrimidine antagonism, pyrimidine-deficient *Neurospora*, *Pierce and Loring*, 1131
Vitamin B_{12} and, interrelationship, *Shive, Ravel, and Harding*, 991
Putrescine: *Hemophilus parainfluenzae* growth, effect, *Herbst and Snell*, 989
Pyridine: Diphospho-. *See* Diphosphopyridine
Pyridoxal: Distribution, *Rabinowitz and Snell*, 1157
See also Vitamin B_6
Pyridoxamine: Distribution, *Rabinowitz and Snell*, 1157
See also Vitamin B_6
Pyridoxine: Distribution, *Rabinowitz and Snell*, 1157
See also Vitamin B_6
Pyrimidine: -Deficient *Neurospora*, cytidine and uridine determination, use, *Loring, Ordway, and Pierce*, 1123
— —, purine and pyrimidine antagonism, *Pierce and Loring*, 1131
Determination, micro-, *Vischer and Chargaff*, 703
-Purine antagonism, pyrimidine-deficient *Neurospora*, *Pierce and Loring*, 1131
Pyrophosphatase: Diphosphopyridine nucleotide, *Kornberg and Lindberg*, 665
Pyrophosphate: Inorganic, diphosphopyridine nucleotide synthesis, enzymatic, relation, *Kornberg*, 1475
Pyruvamide: Metabolism, *Anker and Raper*, 1353
Pyruvate: Synthesis, *Escherichia coli*, acetyl precursor, *Kaplan and Lipmann*, 459
Pyruvic acid: S-Benzylthio-, N-acetyl-S-benzyl-L-cysteine, conversion, *Stekol*, 33
—, synthesis, *Stekol*, 33
Carbonyl-labeled, synthesis, *Anker*, 1333
Metabolism, *Anker*, 1337
Thio-, growth effect, *Stekol*, 33

R

Resin(s): Ion exchange, blood group A-specific substance, isolation, gastric mucin, use, *Bennett and Niemann*, 969
Respiratory enzyme(s): Determination, *Potter, Pardee, and Lyle*, 1075
Respiratory exchange: Apparatus, *Lester and Greenberg*, 53
Riboflavin: Liver, protein-free diet effect, *Seifter, Harkness, Rubin, and Muntwyler*, 1371

S

Saponin: Substitutes, blood oxygen and carbon monoxide determination, *Hiller, Plazin, and Van Slyke*, 1431
Selenium: Poisoning, methionine effect, *Fels and Cheldelin*, 819
Serine: Formate conversion to, *Sakami*, 995
Glycine conversion to, *Sakami*, 995
Serotonin: *Rapport, Green, and Page*, 1237, 1243
Chemical inactivation, *Rapport, Green, and Page*, 1237
Isolation and characterization, *Rapport, Green, and Page*, 1243
Sodium borohydride: Cozymase reduction, *Mathews*, 229
Sodium hyaluronate: *Meyer*, 993
Sphingomyelin: Blood plasma, turnover, radioactive phosphorus in study, *Zilversmit, Entenman, and Chaikoff*, 209
Spleen: Nucleohistone, *Petermann and Lamb*, 685
Squid: Visual purple, absorption spectra, *Bliss*, 563
— —, bleaching products, absorption spectra, *Bliss*, 563

Staphylococcus aureus: Growth, glutamine relation, *Hughes,* 1473
Starch: Amylose and amylopectin, separation and determination, *Krishnaswamy and Sreenivasan,* 1253
Steroid(s): Adrenal cortex, crystalline, liver and kidney phosphatases and arginase, effect, *Kochakian and Bartlett,* 243
Stomach: Mucin, blood group A-specific substance, isolation, ion exchange resins, use, *Bennett and Niemann,* 969
See also Gastric juice
Streptomyces: Xanthomycins A and B, *Thorne and Peterson,* 413
Streptomycin: Cyanate effect, *Fitzgerald,* 223
Succinate: Oxidase, naphthoquinone effect, *Heymann and Fieser,* 1359
Succinic dehydrogenase: Oxalacetate effect, *Pardee and Potter,* 1085
Sulfur: Analogue, choline, behavior, *Maw and du Vigneaud,* 1029
Sulfurous acid: Fuchsin-, heparin, *Jorpes, Werner, and Åberg,* 277

T

Testosterone: Blood plasma guanidoacetic acid, creatine, and creatinine, effect, *Levedahl and Samuels,* 327
Methyl-, blood plasma guanidoacetic acid, creatine, and creatinine, effect, *Levedahl and Samuels,* 327
—, urine guanidoacetic acid, creatine, and creatinine, effect, *Levedahl and Samuels,* 327
Urine guanidoacetic acid, creatine, and creatinine, effect, *Levedahl and Samuels,* 327
Testosterone propionate: Blood plasma proteins, hypothyroidism, effect, *Leathem,* 1285
Liver proteins, hypothyroidism, effect, *Leathem,* 1285
Thetin: Dimethyl-, methionine synthesis, rôle, *Dubnoff and Borsook,* 789
—, related compounds, labile methyl groups, source, *Maw and du Vigneaud* 1037
Thetin—*continued:*
Dimethyl-β-propio-, methionine synthesis, rôle, *Dubnoff and Borsook,* 789
Thiopyruvic acid: Growth effect, *Stekol,* 33
Thymus: β-Chloroethyl vesicants, effect, *Chanutin and Ludewig,* 999
Thyroid: Hormone, circulating, nature, *Taurog and Chaikoff,* 639
See also Hypothyroidism
Thyroxine: DL-, liver and kidney phosphatases and arginase, effect, *Kochakian and Bartlett,* 243
-Related compounds, activity, *Frieden and Winzler,* 155
Tomato: Nitrogen metabolism, isotopic ammonium sulfate in study, *MacVicar and Burris,* 511
Tooth: Calcification, *Sobel and Hanok,* 1103
Composition, blood and diet, relation, *Sobel and Hanok,* 1103
Toxin: *Clostridium botulinum* type A, crystalline, physicochemical properties, *Putnam, Lamanna, and Sharp,* 401
Transamination: Mechanism, *Umbreit, O'Kane, and Gunsalus,* 629
Triacetic acid: Metabolism *in vitro, Witter and Stotz,* 501
-Related diketones, metabolism, *in vitro, Witter and Stotz,* 501
Synthesis and properties, *Witter and Stotz,* 485
Trilaurin: Radioactive, oxidation *in vivo, Geyer, Chipman, and Stare,* 1469
Tryptophan: Nicotinic acid conversion from, mechanism, *Heidelberger, Abraham, and Lepkovsky,* 1461
— acid-deficient diets, rôle, *Singal, Sydenstricker, and Littlejohn,* 1051
Tumor: Glycolysis, *LePage,* 1009
Tyrosinase: Liver, pteroylglutamic acid effect, *Keith, Broach, Warren, Day, and Totter,* 1095
Tyrosine: Determination, chromatographic, *Stein and Moore,* 337

U

Umbilical cord: Hyaluronic acid, preparation and properties, *Follett*, 177
Urea: Nitrogen, urine, determination, hypobromite use, *Chinard*, 1449
Urease: Concentration effect, *Peterson, Harmon, and Niemann*, 1
Uridine: Determination, pyrimidine-deficient *Neurospora*, use, *Loring, Ordway, and Pierce*, 1123
Urine: Ammonia nitrogen, determination, hypobromite use, *Chinard*, 1449
Creatine, testosterone and methyltestosterone effect, *Levedahl and Samuels*, 327
Creatinine, testosterone and methyltestosterone effect, *Levedahl and Samuels*, 327
Dehydroisoandrosterone determination, colorimetric, *Munson, Jones, McCall, and Gallagher*, 73
Guanidoacetic acid, testosterone and methyltestosterone effect, *Levedahl and Samuels*, 327
Protein, determination, alkyldimethylbenzylammonium compounds, use *Chinard*, 1439
—, —, biuret method, *Hiller, Greif, and Beckman*, 1421
Urea nitrogen, determination, hypobromite use, *Chinard*, 1449
Uronic acid: Hyal-. *See* Hyaluronic acid

V

Valine: Determination, chromatographic, *Stein and Moore*, 337
Vasoconstrictor: Blood serum, *Rapport, Green, and Page*, 1237, 1243
— —, chemical inactivation, *Rapport, Green, and Page*, 1237
— —, isolation and characterization, *Rapport, Green, and Page*, 1243
Vasodepressor substance: Liver, ferritin relation, *Mazur and Shorr*, 771
Vesicant(s): β-Chloroethyl, thymus, effect, *Chanutin and Ludewig*, 999
Visual purple: Squid, absorption spectra, *Bliss*, 563
—, bleaching products, absorption spectra, *Bliss*, 563
Vitamin(s): A, carotene conversion site, *Mattson*, 1467
B_6, *Rabinowitz and Snell*, 1157
—, function, *Umbreit, O'Kane, and Gunsalus*, 629
—, transamination, mechanism, *Umbreit, O'Kane, and Gunsalus*, 629
—. *See also* Pyridoxal, Pyridoxamine, Pyridoxine
B_{12} and purines, interrelationship, *Shive, Ravel, and Harding*, 991
—, growth factor, manure, relation, *Lillie, Denton, and Bird*, 1477
—, *Lactobacillus lactis* cultures, dissociation, effect, *Shorb and Briggs*, 1463

X

Xanthine: Oxidase, liver, pteroylglutamic acid effect, *Keith, Broach, Warren, Day, and Totter*, 1095
Xanthomycin: A, *Streptomyces, Thorne and Peterson*, 413
B, *Streptomyces, Thorne and Peterson*, 413

Y

Yeast: Iodoacetic acid action, hydrogen ion concentration effect, *Aldous*, 83
Pentose nucleic acids, *Vischer and Chargaff*, 715

Z

Zinc: Blood, *Vallee and Gibson*, 445
— cell, red, *Vallee and Gibson*, 445
— —, white, *Vallee and Gibson*, 445
—, determination, micro-, dithizone method, *Vallee and Gibson*, 435
— plasma, *Vallee and Gibson*, 445
Tissue, determination, micro-, dithizone method, *Vallee and Gibson*, 435
